
RUNSQLSTM got you GREEN?

Its an SQLThing...

SQLThing's Parameter Window Prompts for Params

Tired of RUNSQLSTM not supporting interactive parameters? Running a script that has parameters in SQLThing causes our Parameter Window to automatically appear. It will prompt for and type check each parameter required by a statement or stored procedure call.

We all know that statements and procedures with parameter markers will execute better. This is due to the packaging options available on the AS/400. SQLThing allows you to test parameterized statements and achieve optimal optimization. If you need to test procedures and parameterized queries, you need SQLThing!

SQLThing automatically determines the type and number of parameters required by a procedure or statement.

Parm #	Data Type	Nulls?	Length	Scale	Data to Bind
1	Date	Y	10	0	04/11/1998
2	Date	Y	10	0	04/11/1998
3	Smallint	Y	5	0	0

SQLThing creates as many parameter boxes as you need and automatically type checks the user input! It even pre-loads the fields with the appropriate data element!
